Japan BioPlastics Association

1. Standards for the Operation of the Logo

- (1) The decision of this committee with regard to the identification of GreenPla and BiomassPla will be final. Those wishing to have permission to use the logo must comply with the instructions of this committee regarding the identification of the relevant GreenPla and BiomassPla.
- (2) Those wishing to have permission to use the logo must submit an application form to provide this committee with advance notification of the usage details and obtain permission to use the logo.
- (3) If identifying the logo, the registration number must, as a general rule, be quoted
- (4) Those who have received permission to use the logo are prohibited to transfer the permission to other parties without approval. The customers, who use the internal material or parts with the logo on their own products, do not have to submit the application form. Those who have the registry number of the logo should inform this committee the fact with documents in advance.
- (5) Those who have received permission to use the logo must submit the relevant product to this committee. In the case the product sample could not be submitted, the applicant should fulfill the committee's instructions.
- (6) The period of validity for use of the logo is three years from the date on which permission to use it is granted. However, this does not apply if an application to continue using the logo is made during the period of validity.
- (7) If the usage details relating to the symbol change, advance notification of the details of the change must be submitted to this committee.
- (8) If the details of the composition (components, configuration) of the GreenPla and BiomassPla have changed and, as a result, differ from the content of the product that has been authorized by this committee to use the logo, use of the logo on the product concerned must be suspended immediately. However, this does not apply if a new application is submitted for permission to use the logo, providing the details of the change in advance, or this committee is contacted with these details in advance and its approval secured.
- (9) If questions arise regarding the use of the logo, this committee should be consulted and its instructions provided.
- (10) If the "biomass-based plastic ratio" of BiomassPla is indicated on the logo, it should be displayed in a manner that conforms to the provisions stipulated separately.
- (11) If it is recognized that a question has arising regarding the content of matters recorded in the documentation introducing products on the market that have secured approval to use the logo, the party that submitted the application regarding the relevant product is required to respond to inquiries from the Logo Management Subcommittee within three months and is obliged to clear up any questions raised.
- (12) In relation to the previous item, if a response is not received within three months, the Logo

Management Subcommittee may invalidate the relevant company's license to use the logo. In this case, this committee will notify the logo user of the revoking of its permit to use the logo and publish this fact on the website of the JBPA.

- (13) All matters relating to the use of the logo are the responsibility of the party that has received permission to use the logo.
- (14) In the event that those who have received permission to use the logo resigned its membership of this association, its permission to use the logo will be invalidated from the date on which it cancels its membership. This committee will publish this fact on the website of the JBPA.

2. Applications to use the Logo

- (1) Those wishing to receive permission to use the logo for the first time, or wishing to change the content of the application regarding a product that has already acquired the right to use the logo, must submit an application that complies with this committee's identification standards and operational standards.
- (2) JBPA regular members, supporting members and logo members (including time-limited symbol members) can apply to use the logo in line with the following requirements.
 - (i) All constituent materials (components) of the product for which the application is being submitted shall be specified on the application form (Form X-1 for GreenPla or Form X-2 for BiomassPla), along with the quantities thereof.
 - (ii) As for the application of GreenPla, a circle should be placed in the remarks column of Form X-1 concerning the main biodegradable polymer. If the item uses multiple biodegradable polymers, the biodegradable polymer that accounts for the greatest quantity shall be classed as the main biodegradable polymer. The main biodegradable polymer will be listed on the GreenPla product database and published on the JBPA website, etc.
 - (iii) In the case of the application of BiomassPla, the Biomass-based plastic ratio should be displayed the numbers truncating the numbers beyond the second decimal point, which is derived from the Biomass-based plastic ratio of the constituent materials listed in BiomassPla Positive List of Class A, C, E, and F.
 - (iv) The measured values or rationally estimated values of specified toxic substances (Appendix 1) contained in the GreenPla and of specified toxic substances (Appendix 3) contained in the BiomassPla for which the application is being submitted shall be specified on the application

form (Form X-1 and X-2). If providing measured values, an analytical report detailing such matters as the method of measuring the content shall be appended; if providing estimated values, the rational grounds for these shall be clearly demonstrated.

- (v) If there are any special notes concerning the method of forming (processing) the GreenPla and BiomassPla for which the application is being submitted, these shall be stipulated on the application form (Form X-1 and X-2 respectively).
- (vi) Details concerning the use (text of explanatory, note of the relevant portion etc.) and scope (display media or place, etc.) of use shall be stipulated on the application form (Form X-1 and X-2).
- (vii) The applicant shall submit the application form to this committee along with a sample of the GreenPla or BiomassPla for which the application is being submitted, or announce the time of submission to the Committee.
- (viii) The results of the screening process will be notified to the applicant by means of a license to use the symbol issued by the committee (or, in the event that permission is denied, the reasons for denial will be stipulated).
- (ix) The application form, appended documents and submitted GreenPla and BiomassPla will be stored by the Committee under the strictest security, and confidentiality relating to the content of the application will be strictly observed. However, GreenPla and BiomassPla (product names) that use the logo may be introduced on the JBPA website.

3. Standards for Acceptance of Use of the Logo on Limited Parts

(1) Composite products consisting of GreenPla and materials not registered on the PL that satisfy the following conditions shall be permitted to use the logo, but only on the GreenPla part.

(i) In the case of composite products that contain materials that are not registered on the PL but are generally deemed to be biodegradable (it is necessary for the applicant to provide a rational explanation concerning the biodegradability), where it is easy to identify the biodegradable plastic part, the use of the logo on the biodegradable plastic part will be permitted.

Those permitted to use the logo must indicate the part to which the logo applies (or does not apply). Moreover, those permitted to use the logo are also responsible for the safety and biodegradability of the parts to which the logo does not apply.

(ii) Even if the composite product contains non-biodegradable materials, use of the logo on the biodegradable plastic part will be permitted, where it is easy to distinguish the biodegradable plastic part from the part made from non-biodegradable materials and to physically separate the two. When applying, the applicant must prove that identification and separation are easy.

Those permitted to use the logo must indicate the part to which the logo applies (or does not apply).

(2) Even if a product as a whole does not achieve the standards for accreditation as BiomassPla, if it is easy to identify the part of BiomassPla from the other parts, permission can be granted for the use of the logo on the BiomassPla part.

Applicants must verify at the time of application that it is easy to identify the part in question.

Those who are permitted to use the logo must clearly indicate to which part the logo is applicable (and to which parts it is not).
